## TROUBLESHOOTING

PROBLEM	SOLUTION
<b>LEDs do not light or function properly.</b>	Check for proper battery installation. Make sure you are using fresh batteries. Check to make sure battery polarity is correct and batteries are seated properly.
<b>Rubber foam arms have shifted to expose underneath wires.</b>	The rubber foam material covering the arms is very durable. Force the rubber foam cover back to its original position. Be aware that the battery wires are present under the foam rubber arms (see Product Overview). Care should be taken to avoid damaging the battery wires.
<b>How much can I bend the arms?</b>	The wire arms are very strong. However, <u>sharply bending the wire repeatedly in the same location</u> may result in the arm being broken. Note, the battery wires may also become damaged which may result in the loss of LED function.

- Use only alkaline batteries from a reputable manufacturer.**
- Do not use different brands of batteries in the same HUGlight™.
- When replacing batteries always replace entire set.

*“Perfect in-the-car lighting for a baby. My daughter falls asleep in the car often and freaks out if she wakes up in the dark. I wrap the Huglight around the headrest in front of her and point the lights downward. The light isn't blinding and she can tell exactly where she is.”*
